Career Objective

- Motivated AIML engineering student skilled in Python, data analysis, and AI model development. Passionate about building scalable AI-driven solutions and delivering real-world impact through machine learning, deep learning, and computer vision technologies.

Skills

- **Programming Languages:** Python, java, HTML, CSS, SQL, Javascript, Devops
- **Libraries and Tools:** PyTorch, Flask, Pandas, Numpy, OpenCV, Github, VS code, Docker
- **Domain Knowledge:** AI/ML, NLP, Data Structures & Algorithms, DBMS, Networks, OOPs

Internship Experience

- **Wipro -Project Intern (Google Cloud Platform)**
Bengaluru | Nov 2025 – Present
- Building and deploying intelligent cloud-based agents using **Google ADK** & GCP services Working with automation, API integration, security policies & scalable backend design Improving performance of real-time AI workflows in cloud environments Agent evaluation : Goldendataset evaluation, LLM as amjudge evaluation, Agent instruction prompt enhancement

Projects

- **Urban Agri- AI-Based Urban Farming Guidance System** - Designed and developed a full-stack AI-powered agriculture assistant tailored for urban users. The application analyzes uploaded images of growing spaces, dimensions, weather, and location data to recommend suitable crops for apartments and indoor environments. Integrated crop recommendation, disease diagnosis, treatment suggestions, weather alerts, and profit/loss estimation. Implemented a day-wise crop monitoring system that evaluates historical plant data and provides progressive guidance until harvest.
- **Analysis and Diagnosis of Dengue-** Developed and deployed deep learning models (CNNs, MLPs) using TensorFlow and PyTorch to analyze clinical and meteorological datasets for accurate dengue diagnosis and outbreak prediction. Applied feature engineering, time-series analysis, and data preprocessing techniques to improve model performance. Collaborated with healthcare professionals to integrate predictive models into user- friendly applications, enhancing accessibility and public health decision-making.
- **AI-powered Competitive Intelligence Orchestrator** using LangGraph and Neo4j GraphRAG to analyze strategic positioning of major IT services firms (Infosys, TCS, Wipro, HCLTech, Accenture). Designed an autonomous multi-agent pipeline that crawls investor relations and news sources, extracts strategic entities (AI brands, partnerships, investments), and structures them into a knowledge graph using subject predicate object triples. Implemented graph-based reasoning to answer inference-driven queries such as partnership overlaps, NVIDIA exposure, and AI expansion strategy. Developed a FastAPI backend integrated with Ollama (Qwen 2.5 7B) and built a dashboard to visualize knowledge graphs, executive summaries, and competitive comparison tables.

Educational Qualifications

Dr.Ambedkar Institute of Technology
B. Tech in Artificial Intelligence and Machine Learning

Bengaluru, Karnataka
2022- Present

Achievements & Activities

- Member of **Speed Cubing Bangalore-** Organized WCA events including Karnataka Cube Championship 2024
- Recognized by the Asia Book of Records and the India Book of Records as a member of Team Recode for creating the large-scale “Mission Sindoor Cube Mosaic” at Forum Mall, JP Nagar (24–25 Jan 2026).

Languages

- English | Kannada | Hindi | Telugu
